

## ELECTRIC BREECH SYSTEM

- Stainless Steel and Aluminum elements
- Diverse Projectile Types
- Compatible with Multiple Standard PAN Threaded Tools (must tell us if you are using on a PAN or on a T3 disrupter)(Two different threaded adapters)
- 24 volt Robot Initiation
- 50 cap Blasting Machine Initiation
- Standard PAN Percussion Ammunition (L-Tech approved only)
- Uses Duke Pro Inc. USTI-ECO initiator system

Ideal Products has produced a user-friendly, shock tube free electric breech system. Our system is compatible with several EOD tools, supporting 50 cap blasting machines and 24-volt robots. The blasting machine must be capable of putting out 300 volts.

Robot conversion is not required with our electric breech system, thanks to the supplied control box. This box utilizes the 24 volts produced by the robot, increasing that power up to 300 volts before initiation. The USTI-ECO will take the impulse from the robot and charge itself up to 300 volts and discharge to fire the breech. This may take up to 4 seconds.

***Must use specialized rounds made by L-TECH Enterprises***
